

Ansell PVA Gloves

Product Images

Description

The Ansell PVA Gloves are one of the only gloves on the market that are suitable for handling strong organic solvents. The polyvinyl alcohol coating material used in the making of these gloves out-performs most other types of chemical-resistant gloves, offering the wearer an added sense of security. These gloves have also been designed with pre-curved fingers and a winged thumb making them easier to manipulate, causing less hand fatigue and a soft two-piece knitted liner for extra comfort

- Virtually inert in aromatic and chlorinated solvents
- Coating: Polyvinylalcoholic
- Liner material: Interlock cotton
- Cuff Style: Gauntlet
- Antistatic
- Length: 355mm
- AQL: 1.0
