| <b>Prod. Ref.</b>       | 76490-000  |
| <b>Safety cat.</b>      | S1 ESD SRC |
| <b>Range of sizes</b>   | 35 - 47    |
| <b>Weight</b>           | 500 g      |
| <b>Shape</b>            | A          |
| <b>Width (2 - 6)</b>    | 10         |
| <b>Width (6,5 - 12)</b> | 11         |

**Description:** White punched **MICROTECH** sandal, **ECODRY** lining, anti-shock, slipping resistant, with low electrical resistance (ESD).

**Plus:** High electrical conductivity. Stability of the conductive capability for extended period. **EVANIT ESD** footbed, made of EVA and nitrile special compound, with high bearing capacity and variable thickness, with low electric resistance. Thermoformed, punched and coated with highly breathable fabric. Perfumed sole. Adjustable velcro closure.

**Suggested uses:** footwear for microelectronic industries. Recommendable in **ATEX** environments.

**Care and maintenance:** Clean after each use and dry off away from direct heat; avoid contact with aggressive chemicals or extreme temperature. Avoid immersion in sea water, lime water or cement mixed with water.

**Recommendation:** It is always necessary to wear socks made of natural fibers i.e. wool or cotton, because they provide the best performance with electrical conductivity. Avoid introducing any foreign body between foot and footbed of the footwear (i.e. insoles or similar items not equipped by the manufacturer), as they could make void the electrical properties the footwear have been conceived for. Do not undervalue the effect of ageing and contamination of the footwear: during time their electrical resistance can be subjected to alterations. It is always important to check the electrical properties of footwear through the use of special testing devices in electrostatic protected area (EPA), according to the European standard CEI EN 61340-5-1.
